

Five Mac tools, one quiet binary

Mole cleans, uninstalls, optimizes, analyzes, and monitors, then gets out of your way.

5 tools, one binary

\$9 pay once, not yearly

2 Macs per license

0 menu-bar clutter

Mac maintenance has scattered into five subscription apps, each wanting a menu-bar slot and a yearly fee. Mole folds them back into **one quiet binary you buy once**, then stays out of the way until you need it.

Why Mole

Five jobs that used to mean five purchases, five updaters, and five icons in your menu bar.

- One-time \$9, two Macs per license, no subscription.
- No menu-bar widget, no background upsell, no telemetry.
- Universal build: macOS 14+, Apple Silicon and Intel.

What's inside

Each tool gets its own page and a single job, nothing bolted on.

- Clean reclaims caches, logs, and leftovers.
- Uninstall removes apps and every trailing file.
- Optimize tunes startup and memory load.
- Analyze shows where disk space really goes.
- Status tracks CPU, disk, and network live.

What it replaces five subscriptions, one purchase

CleanMyMac · Sensei

Clean + Optimize

Space reclaim and system tuning in one pass.

AppCleaner

Uninstall

Apps and their leftovers, fully removed.

DaisyDisk · iStat

Analyze + Status

Where space and load actually go, at a glance.

Five subscriptions quietly add up to a few hundred dollars a year. Mole is **nine dollars, once**, and it never asks again.
